1. Overview

Motivation:

In today's digital age, food has evolved into a medium of connection and cultural exchange. The motivation behind Connect Kitchen is to provide a unified platform where home cooks, professional chefs, and food enthusiasts can share recipes, discuss cooking techniques, and engage with the culinary community.

Customer:

The primary users of Connect Kitchen are food enthusiasts, professional chefs, and home cooks looking to share and explore recipes. The platform will also benefit food businesses that want to engage with customers by offering meal preparation and ordering options.

Project Deliverable:

Connect Kitchen will be a web-based social media platform centered around recipe sharing. It will allow users to interact through comments, likes, follows, and even meal ordering. The project aims to provide an intuitive, user-friendly experience with scalability in mind.

Timeline:

- The project is expected to be completed within six months(1 whole semester) , covering the phases of requirement analysis, design, development, testing, and deployment.

Dependencies:

This project depends on web development frameworks, database management systems, and cloud hosting services. Additionally, the database project of Connect Kitchen will contribute to this software engineering project by providing a structured data model.

2. Project Detail

2.1 Project Goals

Functional Goals:

- Develop a social media-style web platform for recipe sharing.
- Implement user authentication and profile management.
- Allow users to create, share, and interact with recipes.
- Enable meal ordering functionality (if feasible).

Technological Goals:

- Use React.js or Vue.js for the front-end.
- Implement a robust back-end using Node.js/Express or Django.
- Use PostgreSQL or MySQL for efficient data management.
- Deploy the application on a cloud-based platform.

Quality Goals:

- Ensure an intuitive user experience.
- Maintain secure user authentication.
- Provide scalability to accommodate future growth.

Organizational Goals:

- Apply agile development practices.
- Enhance team members' competence in full-stack web development.

Constraints:

- Compliance with standard security practices for web applications.
- Efficient resource management to ensure smooth deployment.

2.2 Project Scope

In Scope:

- User authentication and management
- Recipe creation, sharing, and engagement (comments, likes, follows)
- Responsive and interactive UI/UX
- Backend development for data storage and retrieval
- Potential meal ordering integration

Out of Scope:

- Advanced AI-based recipe recommendations (possible future feature)
- Native mobile app development (only web-based in this phase)
- Large-scale deployment (initially targeting a small user base for testing)

2.1 Project Team

Name	Availability	Comment
Anas Saleem	Full time	testing and backend developer
Ashar Zamir	Full time	testing and frontend developer
Bilal Ahmed	Full time	Team lead

2.2 Existing Work

Several recipe-sharing platforms exist, such as AllRecipes, Yummly, and Tasty. These platforms offer various features, but they often focus solely on recipe discovery rather than fostering a strong culinary community. Connect Kitchen aims to bridge this gap by combining recipe sharing with social media engagement. By integrating interactive UI components, user-friendly features, and seamless backend functionality, our platform will provide an engaging and dynamic experience tailored for food enthusiasts, setting it apart from existing solutions.
